Retro-DWS®
Internal Heating Cable System for Non-Pressurized Sewer and Waste Drain Pipes

Installation Instructions

Kit Description
Retro-DWS is a tubular self-regulating heating system designed for use in 4-inch and 3-inch non-pressurized sewage and waste water drain lines, as well as other large diameter non-pressurized pipes and storm drains. The core tube is constructed of HDPE (high density polyethylene) and will push inside most pipes for long distances. They can also be drawn in with a fish tape.

Retro-DWS utilizes a conductive polymer tubular heater technology which provides a barrier from the fluids while providing extremely efficient freeze protection. Retro-DWS can be used as a system to prevent freezing or as a precautionary system. If the drain waste or sewer freezes, the system can be energized to begin the thawing process.

Retro-DWS is supplied with all of the necessary fittings for 4-inch or 3-inch pipes at a clean out or other entry point. The Retro-DWS can be easily adapted to fit larger pipe diameters if required by using readily available, industry standard components.

Typical Retro-DWS-GFC supplied with a 4 foot electrical cold lead. Available with Ground-Fault Protection (GFC) or Cord-Set (CS) both in 120 volt and 240 volt.

For installation of Retro-DWS into other applications refer to Retro-DWS Other Methods document.
Retro-DWS Installation

Retro-DWS Installation

Additional Materials Required

- Teflon tape or thread sealant

Optional Accessories

- HLA-120: General purpose 120V, plug-in thermostat (for GFC models)
- GF-STAT: NEMA 4X Ground Fault Protected Thermostat 120V/240V 30amp (for CS models)
- MA-10: GFC/ELCI Electrical Equipment Protection Device (for CS models)
- TIMER-120P: 120V plug-in timer (for GFC models)
- TIMER-240P: 240V plug-in timer (for GFC models)
- TIMER-CS: 120/240V hard wire timer (for CS models)
- INSUL-FOIL: Aluminum reflective metalized foil bubble insulation

- FOIL-TAPE: Professional Grade All Weather Foil Tape 2.83 inches x 150 feet (72mm x 46m)
- INSUL-3.00: Polyethylene insulation sleeve for 3 inch ID pipe (6 feet long, 3 1/2 inch ID, ½ inch thick wall)
- INSUL-4.00: Polyethylene insulation sleeve for 4 inch ID pipe (6 feet long, 4 1/2 inch ID, 1 inch thick wall)
- HLP-TAPE: Black wrap tape for sealing insulation ends together 2 inches x 100 feet (50.8mm x 3m)
- TORQ-60: No hub torque wrench automatic release at 60 IN. LB.
- WARRANTY: Extended 10 year limited product warranty
Standard 4-inch Cleanout

1. Remove threaded cleanout plug.
   **CAUTION:** Effluent may be present when threaded cap is removed.

2. Apply Teflon tape or thread sealant to the 4" ABS threaded male adapter SPIG X MIPT.
   - Make sure to apply the Teflon tape in the direction of the threads to ensure it remains tight during threading of the fittings.
   - Thread the male adapter into the clean-out female entry point.

3. Loosen the clamps on either end of the 4" flexible pipe coupler, do not remove the clamps from their seated location on the flexible pipe coupler body.

4. Slide the flexible pipe coupler onto the now exposed spigot end of the male threaded adapter fitting and tighten the clamp to 60 inch-lb.

5. Push the pre-drilled dissolving ballpoint onto the end-seal of the tubular heater making sure it is firmly in place. Then begin to feed the tubular heating cable system into the pipe through the installed flexible coupler.

   **Note:** The pre-drilled dissolving ballpoint is designed to reduce the friction of the Retro-DWS tubular heater end-seal during installation. It also aids the passing of the tubular heater product through and around fittings located along length the pipe.
6. Insert the Retro-DWS pipe core into drain until the bushing interfaces into the coupling.

7. Tighten clamp around Retro-DWS to 60 inch-lb.
   • In accordance with standard industry practices test the integrity of the seal.

Standard 3-inch Cleanout

1. Remove threaded cleanout plug.
   CAUTION: Effluent may be present when threaded cap is removed.

2. Apply Teflon tape or thread sealant to the 3’ ABS threaded male adapter SPIG X MIPT.
   • Make sure to apply the Teflon tape in the direction of the threads to ensure it remains tight during threading of the fittings.
   • Thread the male adapter into the clean-out female entry point.

3. Loosen the clamps on either end of the 4’ x 3’ flexible pipe reducer, do not remove the clamps from their seated location on the flexible reducer body.

4. Slide the 3’ adapter side of flexible pipe reducer onto the now exposed spigot end of the male threaded adapter fitting and tighten the clamp to 60 inch-lb.
5

- Push the pre-drilled dissolving ballpoint onto the end-seal of the tubular heater making sure it is firmly in place. Then begin to feed the tubular heating cable system into the pipe through the installed flexible coupler.

**Note:** The pre-drilled dissolving ballpoint is designed to reduce the friction of the Retro-DWS tubular heater end-seal during installation. It also aids the passing of the tubular heater product through and around fittings located along length the pipe.

---

6

- Insert the Retro-DWS pipe core into drain until the bushing interfaces into the coupling.

---

7

- Tighten clamp around Retro-DWS to 60 inch-lb.
- In accordance with standard industry practices test the integrity of the seal.
- Plug in heater and Test/Reset GFCI located in cord set.

---

8

After all plumbing fittings have been completely installed. It is time to energize your Retro-DWS system. Carefully follow the Electrical System Check Instructions below.

---

9

Refer to Control Devices and Insulation Installation on page 7 to complete your installation.
Control Devices and Insulation Installation

Control devices are not required to operate the heating cable system. They can be added for energy efficiency. **Thermostats** are used to duty cycle the system in an on/off operation saving power consumption and maintain a certain pipe temperature. A sensor lead must be placed on the coldest section of pipe.

**Timers** are used to duty cycle the system in an on/off operation based on preset time intervals to save on power consumption.

**Insulation** is recommended for all new pipe installations, even where the pipe is to be buried.

For existing pipe applications, insulation is only required where the pipe is exposed to ambient outdoor temperatures, and/or where the pipe is above the ground. Insulation aids in heat retention making the heating cable more energy efficient and providing cold weather reliability.
**Electrical Installation and Testing**

**Electrical System Check on GFC Models** *(perform monthly while in use)*

A. Unpack the Retro-DWS system plug from its protective package.
B. Plug into your dedicated outlet. 120V outlet (5-15R) for 120V systems or 240V outlet (6-15R) for 240V systems.
C. Push RESET button on the cord set ground fault device until light turns ON. If light does not illuminate check power to outlet. Do not remove or tamper with the cord set. If used with a thermostat it may be necessary to bypass the thermostat control and plug directly into receptacle to perform test.
D. Push TEST button and light will turn OFF. This indicates that the electrical circuit is intact and fully protected.
E. Push RESET button again and light will turn ON. This indicates that your Retro-DWS is working.
F. Follow this test procedure before each season and monthly while in use.

Your Retro-DWS is now fully functional.

If at any time your Retro-DWS system fails to work call your local electrician or Heat-Line for assistance at (800) 584-4944.

---

**Limited Warranty**

During the time periods and subject to the conditions hereinafter set forth. Heat-Line will repair or replace to the original user any portion of your Retro-DWS product which proves defective in materials or workmanship of Heat-Line. Contact Heat-Line or your installer for warranty service.

At all times Heat-Line shall have and possess the sole right and option to determine whether to repair or replace defective equipment, parts or components. **Damage due to natural events or conditions beyond the control of Heat-Line are NOT COVERED BY THIS WARRANTY.**

**STANDARD WARRANTY PERIOD:** 60 months from date of purchase or 63 months from date of manufacture, which ever occurs first.

**EXTENDED WARRANTY PERIOD:** 120 months from date of purchase or 123 months from date of manufacture, which ever occurs first.

**ACCESSORIES, COMPONENTS, ELECTRONICS:** Not manufactured by Heat-Line, are warranted only to the extent of original manufacturer’s warranty.

**LABOUR, COSTS, ETC.:** Heat-Line shall in NO EVENT be responsible or liable for the cost of field labour or other charges incurred by any customer in removing and/or reaffixing any Heat-Line product, part or component thereof.

**NOTE:** GFCI model shown may not represent actual GFCI.

**THIS WARRANTY WILL NOT APPLY:**
(a) to defects or malfunctions resulting from failure to properly install, operate or maintain the unit in accordance with printed instructions provided,
(b) to failures resulting from abuse, accident or negligence;
(c) to normal maintenance services and
(d) to parts not used in accordance with applicable local codes, ordinance and good trade practices;
(e) if the unit is moved from its original installation location or
(f) if the unit is used for purposes other than for what it was designed and manufactured,
(g) to the integral ground fault device and related electronics.

**PRODUCT IMPROVEMENTS:** Heat-Line reserves the right to change or improve its products or any component thereof without being obligated to provide such a change or improvement for units sold and/or shipped prior to such change or improvement.

**WARRANTY EXCLUSIONS:** As to any Heat-Line product after the expiration of the time period of the warranty applicable thereto as set forth above. There will be no warranties including any implied warranties of merchantability or fitness for any particular purpose. No warranties or representations at any time made by any representative of Heat-Line, shall vary or expand the provisions hereof.

**LIABILITY LIMITATION:** In no event shall Heat-Line be liable or responsible for consequential, incidental or special damages resulting from or related in any manner to any Heat-Line product or parts thereof. In the absence of suitable proof of the purchase date, the effective date of this warranty will be based upon the date of manufacture plus 90 days.

Specifications are subject to change without notice. In addition, Heat-Line reserves the right to make changes—without notification to Buyer—to processing or materials that do not affect compliance with any applicable specification.
CONGRATULATIONS!
You have just purchased the most advanced internal freeze-protection system available on the market, backed by the finest warranty offered in the industry. Your Retro-DWS system comes with a standard 5 year limited warranty with an optional 10 year limited warranty available.

~ The warranty applies only to the original purchaser of the product and is not transferable at any time for any reason. The warranty form must be filled out and returned to Heat-Line within 6 months of invoice date or unit manufactured date plus 9 months to be eligible for the 10 year extended warranty. ~
