EPURE-03 FEBRUARY, 2012

## NDOT INDUSTRI

## **EndoPure**

## The Standard in Polyethylene Pipe and Tubing

**EndoPure** is a unique premium pipe and tubing; below are a few of the key points that distinguish **EndoPure** from other HDPE products:

- **EndoPure** is color coded blue to meet the international standard for water pipe and tubing. EndoPure will always provide a visual identification in the crowded underground.
- EndoPure has a clear core of virgin natural HDPE providing visible proof of quality and the assurance that no regrind materials have been used to produce *EndoPure*.
- EndoPure is produced from PE 4710 High Performance HDPE resin with a track record of quality and performance and a 25% higher pressure rating than PE 3608 resin.
- EndoPure when accidentally gouged or cut will show the clear core, a visual indication that significant damage has occurred, something that is hard to spot on solid colored pipe.
- EndoPure is entirely compatible with current fitting and connectors made for HDPE water pipe and tubing.
- EndoPure has continuous consecutive footage marks every two feet to assist in installation.
- EndoPure is UV stabilized for protection from sunlight deterioration. When installed as underground water service tubing the life expectancy is up to 100 years.
- **EndoPure** printing is permanently embossed.
- EndoPure is NSF Certified to NSF-14 & 61 and meets AWWA C901-08 standards.
- **EndoPure** is backed by the strongest warranty in the industry. Endot is so confident that *EndoPure* is the best, most durable pipe and tubing available, we provide a warranty with no time limit and a labor reimbursement 3 times that of other plastic pipe and tubing.
